Outlook

Although macro conditions in the global economy have turned negative, India continues to be a pocket of enhanced economic development aided by strong demand in infrastructure development. We believe India's real estate market is likely to maintain its current upcycle and though mortgage rates have hardened a little, the overall sentiment and consumer demand to own a home would play out in the medium term. Keystone through its well thought out strategy of addressing niche micro markets across a wide spectrum of housing segments is confident of being a dominant developer.
